Data Visualization and Dashboards with Tableau

Federal Aviation Administration Wildlife Strikes Dataset

Dataset information

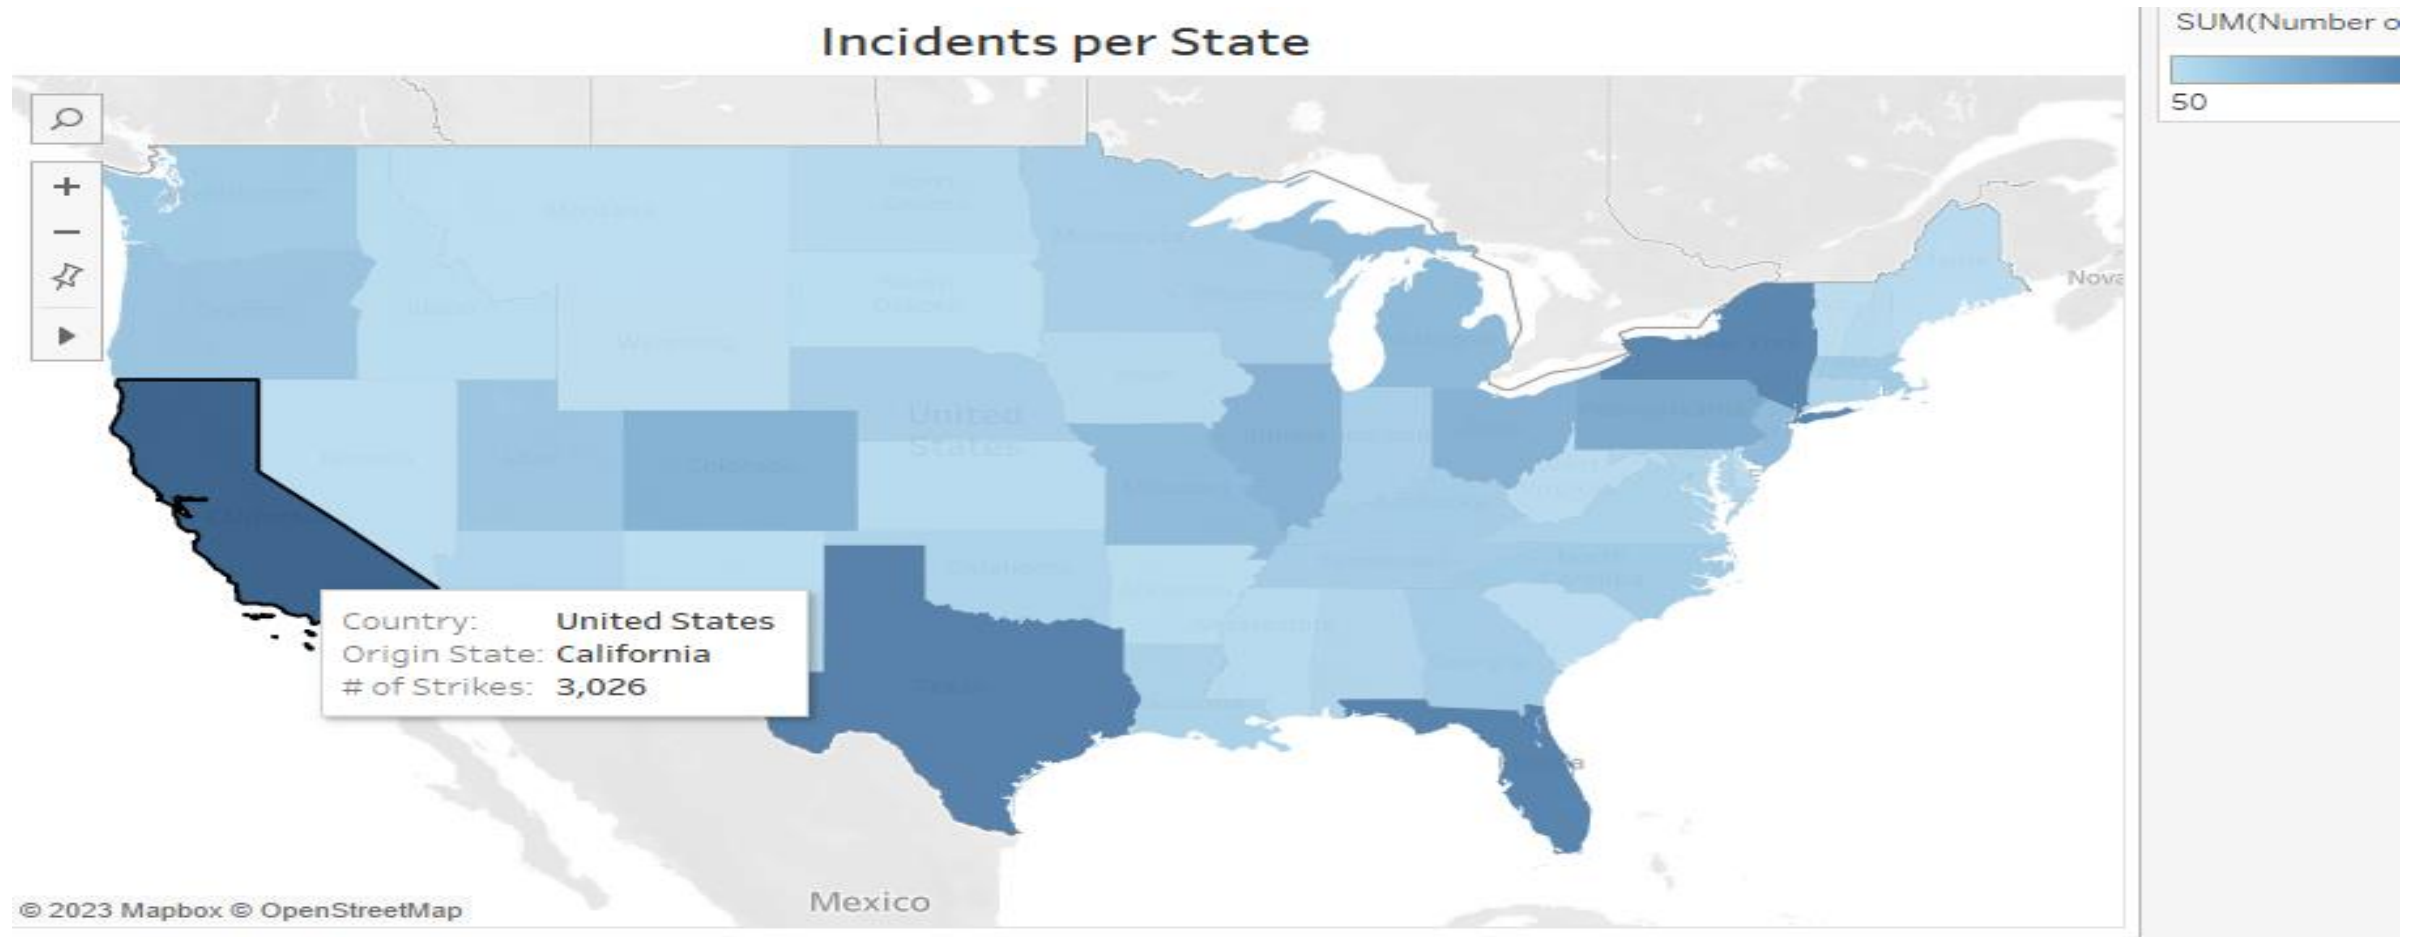

Questions

- Which state has the highest number of wildlife strikes
- Which wildlife category was the most responsible for those incidents
- Top ten species in this category
- In which phase of the flight did the strikes happened most often and to what extent did they cause damage
- What is the trend of the incidents over the years
- Forecast for number of strikes and cost of damage

The state of California recorded the highest number of strikes

Birds caused the greatest number of incidents

Percentage of strikes per Wildlife Category

Wildlife: Animal Category

- Bats
- Birds
- Terrestrial Mammals

Top ten species in the Birds Category

Top Species Involved in incidents

Top N

Damage shown by Phase of Flight

Extent of Damage at each Phase of Flight

Amount of damage

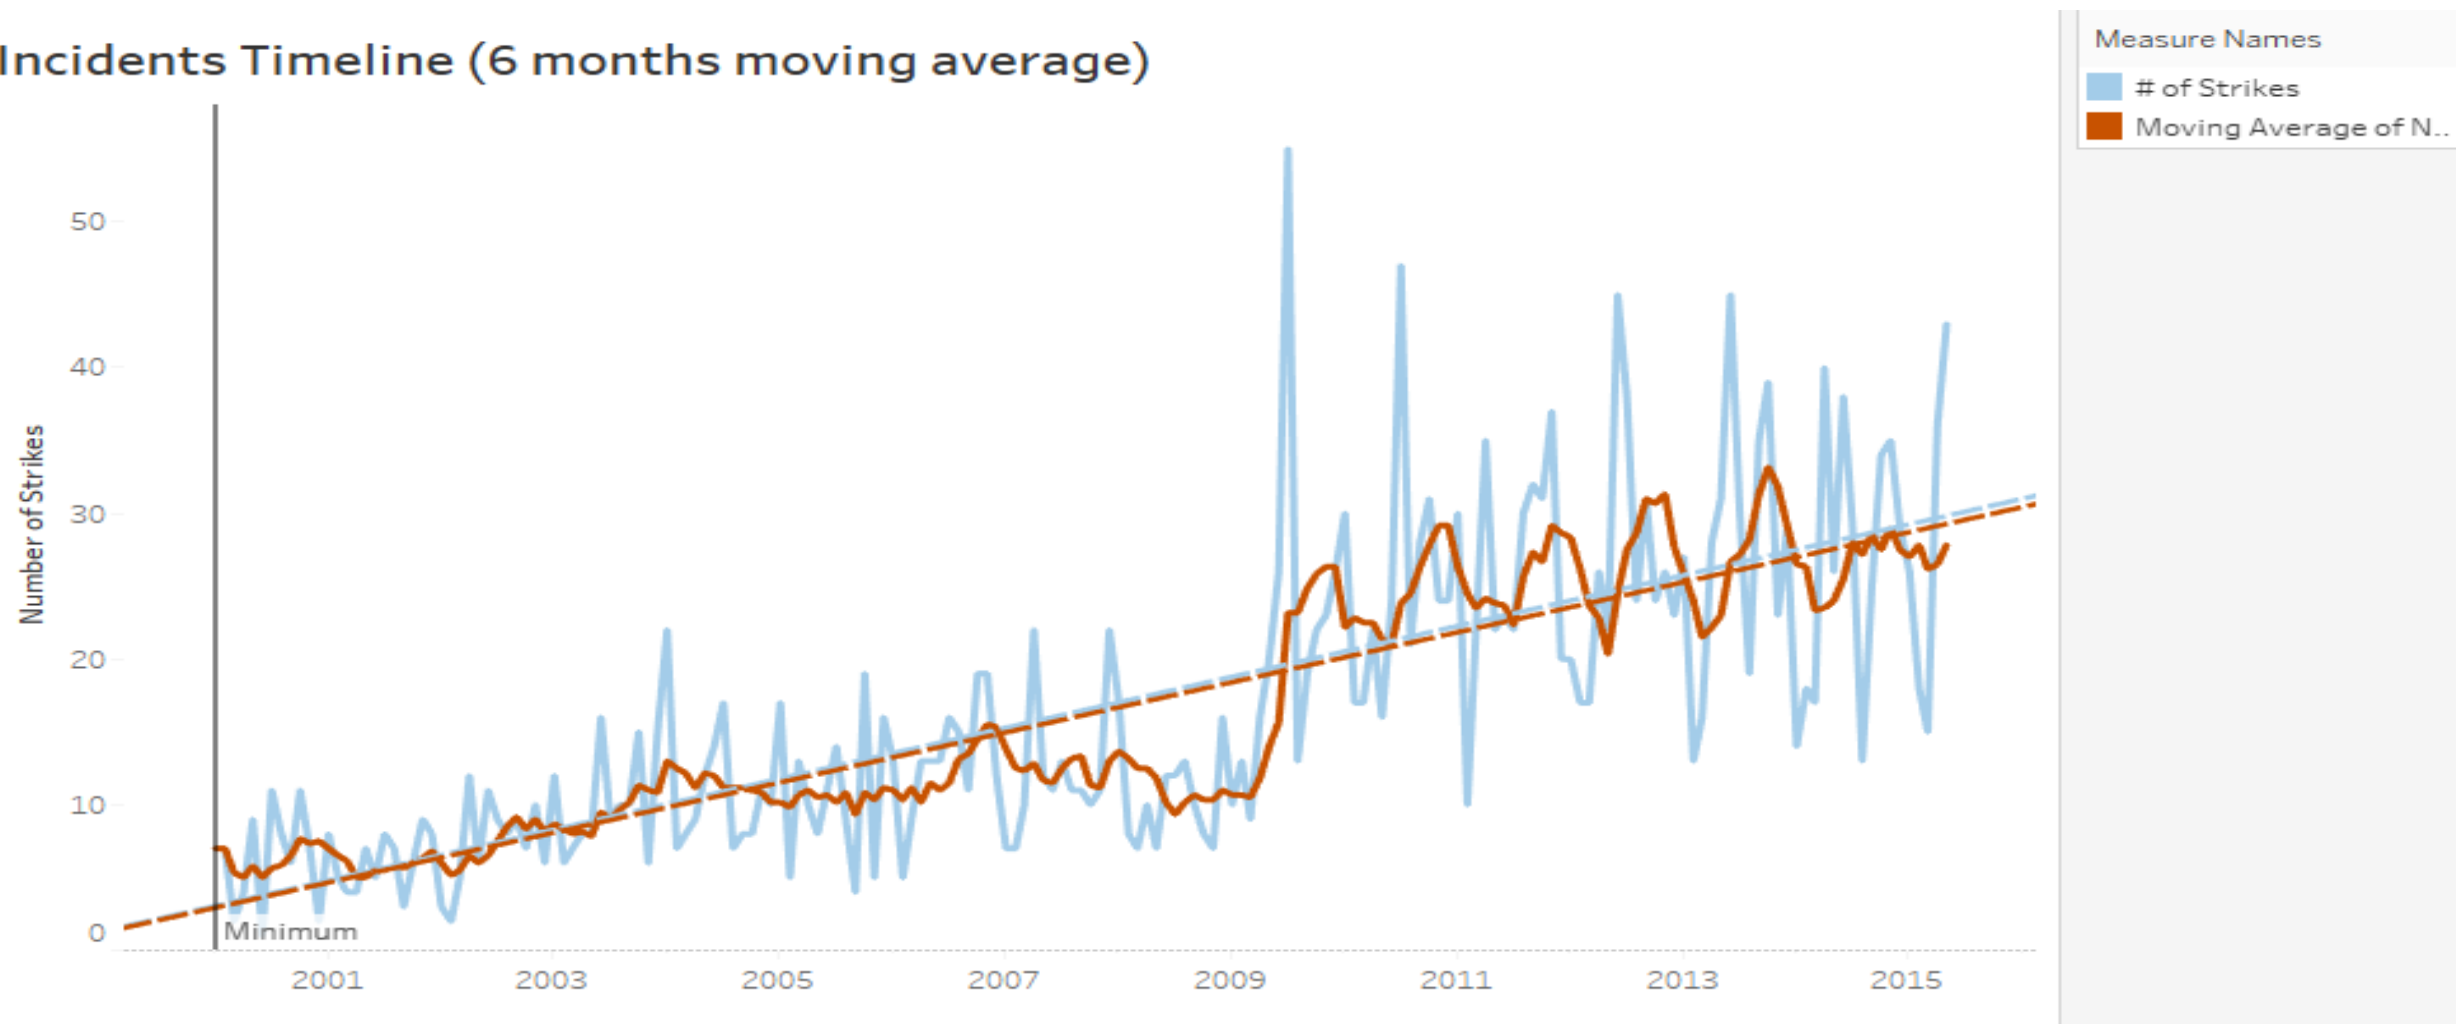

- Destroyed
- Medium
- Minor
- Substantial
- None

Amount of damage Par...

None

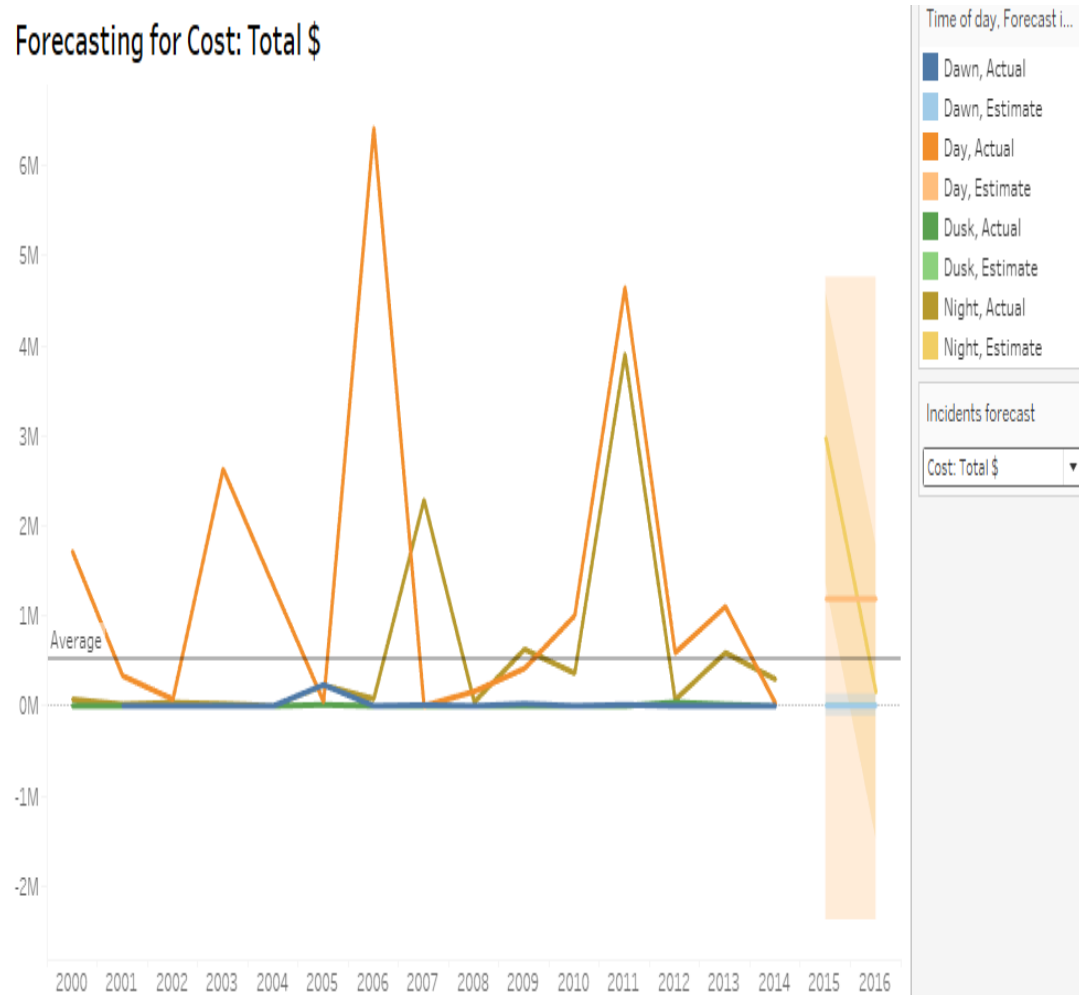

Trends of incidents over the years

Incidents Timeline (6 months moving average)

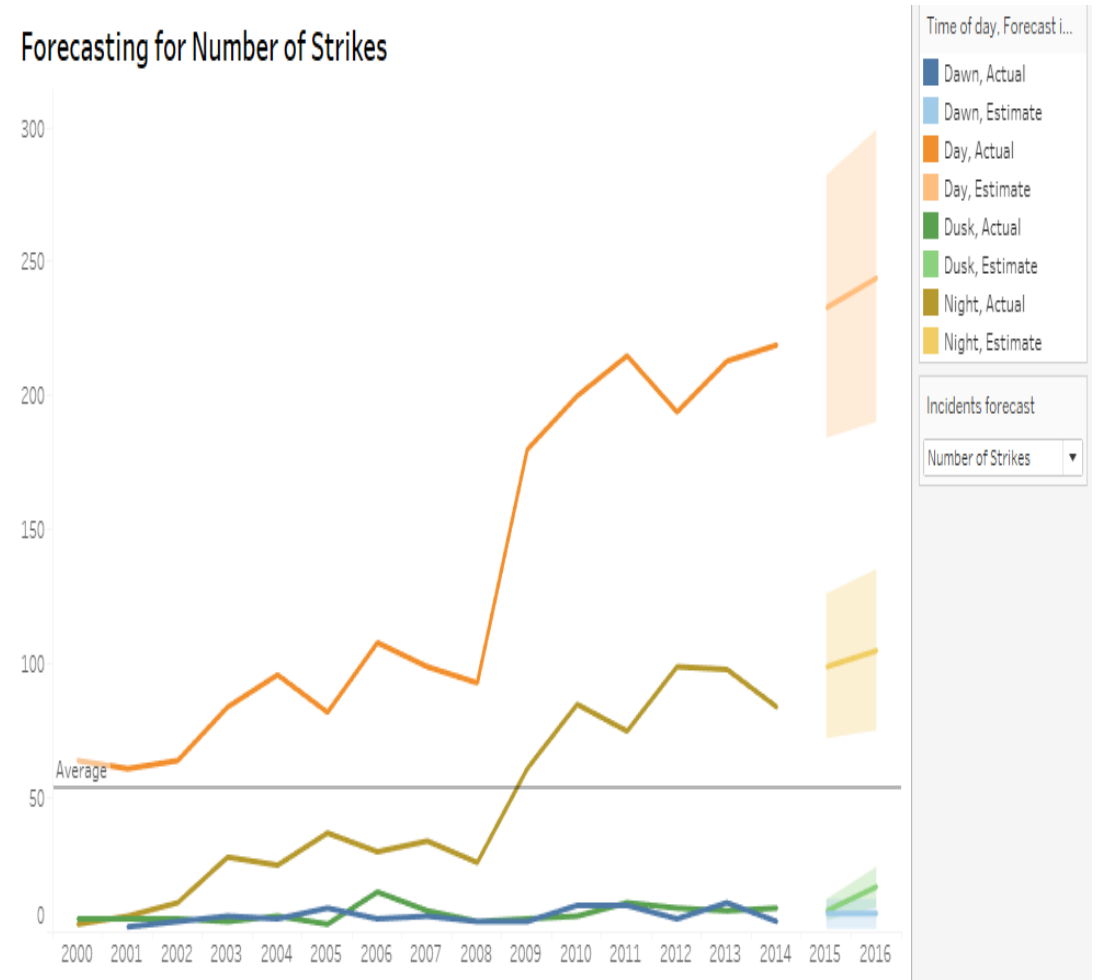

Forecast for next two years

Forecasting for Cost: Total \$

Forecasting for Number of Strikes

Dashboard

SUMMARY FOR Wildlife Strikes between 2000 and 2015

\$29,671,432

Total Cost

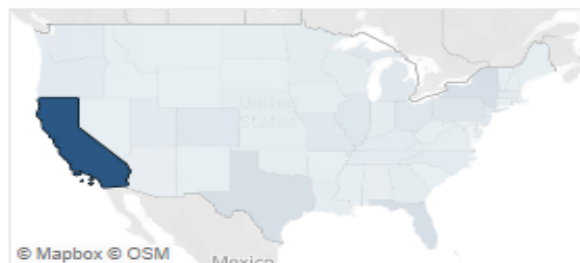

3,026

of Strikes

192

of Wildlife Species involved

Incidents per State

Percentage of strikes per Wildlife Category

Top Species Involved in incidents

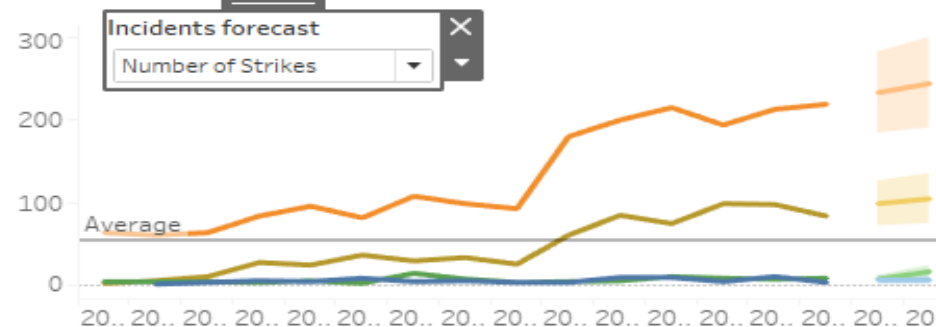

Extent of Damage at each Phase of Flight

Incidents Timeline (6 months moving average)

Forecasting for Number of Strikes

Data Source: FAA Wildlife Strikes (faa_data_subset) as of 2023-07-10 11:34:19 a.m.

Challenges / Goals

- Performing complex calculations with Level Of Detail expressions
- Using containers in dashboard
- I would explore more visualizations by using different fields
- I would like to master how to create calculated fields, creating parameters and using LOD expressions
- I would like to develop my skills creating interesting and interactive dashboard

THANK YOU
